

# BETTER WAYS MEAN BETTER DAYS.

Storeroom Asset Management to keep your whole business smiling.

Asset management in the storeroom should be simple. Assets in. Assets out. Eventually these assets make their way back to your stores to be reallocated or disposed of. And then the cycle starts again.

Unfortunately, spreadsheets have their shortcomings.

Multi-users with multiple data sets are never the best combination. Especially when complexity is high.

'Has this data been captured accurately – and will it actually stay that way?'  
 'How do I keep up with seemingly constant changes?'  
 'Are my assets really where I think they are?'  
 And even... 'Do these assets even still exist?'  
 These frustrations eventually lead to the question 'What if there was a better way?'

**In a world where complexity is king, we're bringing simplicity back. Here's how NAM cuts through the complexities to make it as simple as possible to streamline storeroom asset management:**

- Mobile scanning applications for data capture and updates
- Preconfigured dropdown menus to ensure data consistency
- Enforced data quality across the entire business, not just in storeroom
- Process driven to ensure accountability throughout the asset lifecycle
- Robust; multi-user platform
- Dashboard for user-friendly reporting
- Integration with all major ERPs
- Audit assets in real time, on demand
